

Xcel Energy's Material's Distribution Center Training Center Tour

Thursday, September 14th, 2017 | 11:30am – 4:00pm

EPCE member and meeting host, Xcel Energy, invites our coalition to tour their training facility. This is a great opportunity to benchmark another utility's training center and learn about their training strategies and commitment to excellence in training.

The state-of-the-art training center includes 45,000 square feet of classrooms, training labs and office space that will allow for enhanced hands-on training in a controlled environment, coupled with concurrent computer-based training. The center includes the following training facilities:

- electric lineman classroom and lab
- electric substation/transmission classroom and lab
- gas classrooms, meeting rooms and labs
- weld lab
- pole yard
- computer lab

The training center is utilized year-round, facilitating the training of nearly 200 gas and electric apprentices, as well as more than 1,000 employees who require gas operator, safety and design training.

Note: Xcel Energy will provide transportation to and from the training facility, which is about 30 minutes north of Denver.
